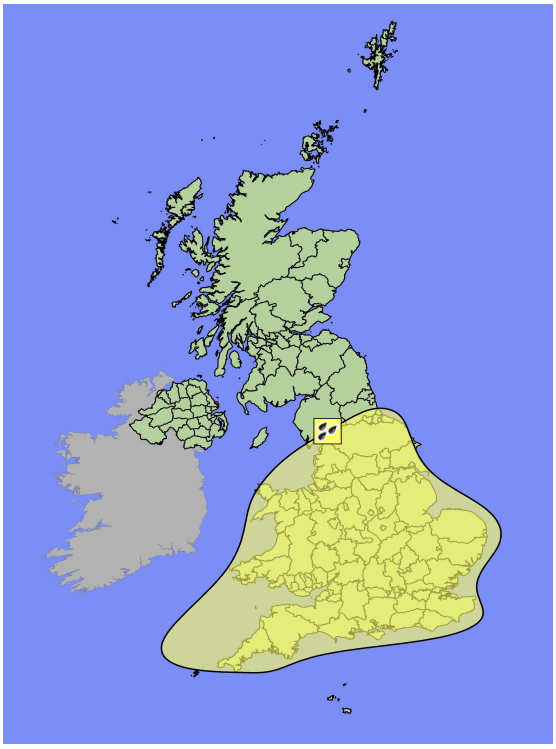
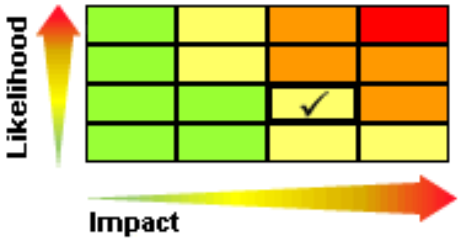
National Severe Weather Warning Service





Chief Forecasters Assessment
An active frontal zone will move quickly east across southern Britain early on Friday but is likely to become slow moving over northern England. Amounts of rainfall are likely to be between 10 and 20 mm for most and isolated 30 mm locally - not normally much of an issue, but given the wet ground some localised flooding is possible. Over northern England, where the front becomes slow moving, totals may reach 20 to 40 mm more widely, and perhaps exceed 60 mm locally. However, there remains some uncertainty and details will be firmed up nearer to the time.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Fri, 13th Jul 2012** until **23:59 on Fri, 13th Jul 2012**

Outbreaks of heavy rain are likely in most areas of England and Wales (except the far north) during Friday.

The public should be aware that given ongoing near-saturated conditions, some localised flooding may result
